My process

How I build it: answers **only from your data.**

I make sure your bot never invents prices or policies. Only relevant records reach the model.

1**I load your data**

I turn your docs, FAQs, catalogue and orders into structured records.

2**I add smart search**

I rank results by relevance and add synonyms. "Dentist" finds teeth, braces, cavity.

3**I pick top matches**

Only the best records go to the model as context. Nothing else.

4**I connect the LLM**

I wire in Gemini, OpenAI or Claude. It replies with text plus cards.

5**I build the actions**

Booking, calendar file, order lookup and lead capture.
